

QNAP

# TS-i410X

10GbE Industrial Wide-  
Temperature SATA SSD NAS

Equipped with 4-core Intel Atom® x6425E processor  
Supports 4 x 2.5-inch SATA SSD, 2 x 10 GbE, 1 x HDMI  
Rugged and high performance, suitable for semi-outdoor or in-vehicle applications

Operating  
temperature

-40°C ~ 70°C

# TS-i410X SSD NAS Features

## Supports 4-bay 2.5-inch SATA SSD

Supports four 2.5-inch SATA SSD bays with industrial wide-temperature SSDs to operate in a harsh environment.

## Wide operating temperature(-40°C ~ 70°C)

Suitable for use in low and high temperature environments

## Wide input voltage (DC 9-36V)

Wide input voltage can be used with various industrial power supplies

## Dual 10 GbE ports

High-speed 10GbE network bandwidth for faster data transfer experience

## Military-grade vibration test

Compliance with MIL-STD-810H vibration test

## 4K HDMI

Provides one port HDMI output for video output

# TS-i410X can be used for vehicle surveillance system

## Expansion of Vehicle surveillance storage space is important.

According to the World Health Organization report on 2021/6/21, road traffic accidents cost most countries 3% of the gross domestic product. About 1.3 million people lose a life each year due to traffic accidents, and 200 to 50 million people are injured or Disabled. Therefore, the driving recorder and the vehicle surveillance system are critical devices. For example, to store the video data of multiple vehicle network cameras on traffic or tourist buses, the storage space of most vehicle VNVR systems is insufficient. The TS-i410X NAS can be installed in an automotive environment with four 2.5-inch SATA slots for high-capacity SSDs, effectively extending the time of surveillance video storage.

Link: <https://www.who.int/news-room/fact-sheets/detail/road-traffic-injuries>

# Typical in-vehicle surveillance system connections

# NAS with excellent anti-vibration (MIL-STD-810H testing)

MIL-STD  
810H

## Military-grade anti-vibration

Suitable for smart factories and in-vehicle applications

Smart  
factory

in-vehicle  
application

## 4-bay fanless & rugged data storage in outdoor field

The TS-i410X 4-bay NAS is compliant with the 2019 latest version of the US military vibration standard (MIL-STD-810H METHOD 514.8 ANNEX C) operation and transportation testing, ensuring that it can work in harsh surroundings without any service interruption.

# One of a kind, against cold and heat, NAS w/ wide operating temperatures

## NAS design reaching a higher level

QNAP's new TS-i410X breaks the established impression that traditional NAS only can be installed in an office or data center with air conditioning. In addition to backup your data, it is also against the cold and hot temperatures, so using TS-i410X NAS in the outdoor environment is perfect. This ultimate design has finally arrived.

**-40°C ~ 70°C**

The TS-i410X supports four 2.5-inch SATA SSDs, which can be installed in an environment of -40°C to 70°C by using wide temperature SSDs.

## 2.5-inch SATA SSD advantages

Compared with M.2 NVMe PCIe SSD, 2.5-inch SATA SSD has more space for placing flash chips, thus higher data storage capacity. In addition, it has better heat dissipation performance and does not require additional heat sinks. The 2.5-inch SATA SSDs provide a balanced choice between high capacity and performance.

## SSD (Solid state drives) is reliable and fast

The traditional HDD which rotates the disk plates to read/write the data is not suitable in any place with vibration. HDD can also be easily damaged due to movement and collision. 2.5-inch SATA SSD stores data in flash chip without disk head and therefore it is better against shock & vibration. The performance of SSD is also much faster than HDD.

# Why choose the 2.5-inch SATA SSD drive for NAS?

The TS-i410X supports four 2.5-inch SATA SSDs, which can be installed in an environment of  $-40^{\circ}\text{C}$  to  $70^{\circ}\text{C}$  by using wide temperature SSDs.

# Recommended with Exascend industrial wide temperature 2.5-inch SATA SSD

## Exascend industrial-grade 2.5-inch SATA SSD that passed the TS-i410X compatibility test

Exascend is a professional SSD storage solution company. Its SI3 industrial-grade 2.5-inch SATA-III industrial-grade wide-temperature SSD designed with the Marvell controller can operate in  $-40^{\circ}\text{C} \sim 70^{\circ}\text{C}$  with TS-i410X NAS.

## Exascend SI3

Industrial 2.5-inch SATA SSD  
Optional capacity (240GB~3.84TB)

Link: <https://exascend.com/>

TS-i410X provides four 2.5" SATA slots

# Adjust QTS SSD temperature warning settings for wide-temperature SSDs

Enable temperature alarm and set it to be 85°C if you use wide temperature SSDs

When using industrial wide temperature SSDs, users need to adjust the disk warning setting to 85°C (The default temperature is 70°C for SSDs) in QTS to match the upper limit of operating temperature from SSDs.

# Supports an optional VESA 75 wall-mount bracket for diversified setup

## VESA 75 wall-mount bracket

Contrary to the conventional desktop setup, the QNAP TS-i410X NAS can be mounted in a factory environment using a commercially available standard VESA 75 wall-mount bracket.

# For use in the semi-outdoor environment to monitor valuable assets

## Deploy the NAS in more areas

The semi-outdoor environment usually introduces significant temperature differences and is not device friendly. Therefore, the TS-i410X NAS, equipped with a rugged chassis and wide temperature design, together with QVR Elite surveillance monitoring software and 3rd-party IP cameras, are especially suitable. As a result, there is no need to worry about the unexplained loss of valuable assets such as greenhouse cultivation, livestock farming, aquaculture, and other production environments.

# Which RAID mode to use in a 4-bay NAS for data protection?

RAID (Redundant Array of Independent Disks) is a technology that uses more than two disks to form a fault-tolerant protection mechanism, which can protect data when a certain number of disks are damaged. When protection is the priority using four disks to create an array in TS-i410X, we recommend RAID 6. If you think performance is the priority, we recommend RAID 10.

	Single	JBOD	RAID 0	RAID 1	RAID 5	RAID 6	RAID 10
Minimum number of disks	1	1	2	2	3	4	4
Allow number of disks fault	0	0	0	N-1	1	2	Each group of RAID 0 allow one
Capacity equals several disks	1	N	N	1	N-1	N-2	N/2
Protection	N/A			High	Mid and lower	Upper Mid	Upper Mid
Performance	Single		High	Single	Mid	Mid and lower	Upper Mid

# Quad-core Intel Atom X series, up to 3.0 GHz

## Wide operating temperature range, long-term supply until at least 2029

When small and medium-sized businesses are buying data storage equipment, they need flexible and long-term implementation according to the demand of the project stage. When the initial budget is relatively limited, the NAS is purchased for the creation of related applications. However, when they want to deploy or expand, they often found out that the originally purchased NAS model was discontinued because the CPU was end of life (EOL). Therefore, they need to re-evaluate a new NAS model. The TS-i410X uses the Intel Atom x6425E CPU with long-term availability until at least 2029, solving customers' long-standing problems.

# QNAP industrial 10 GbE fanless network switch

## QNAP Industrial-grade QSW-IM1200-8C (managed)

8 x 10G/5G/2.5G RJ45 Multi-Gig  
4 x SFP+

Operating temperature -30°C-65°C

## QNAP Industrial-grade 10GbE Managed Switch

Under noise sensitivity and severe ambient temperature, the TS-i410X NAS with the QSW-IM1200-8C industrial-grade managed switch are perfect partners by QNAP design. Moreover, through the 10GbE network configuration, you can enjoy high-speed data transmission.

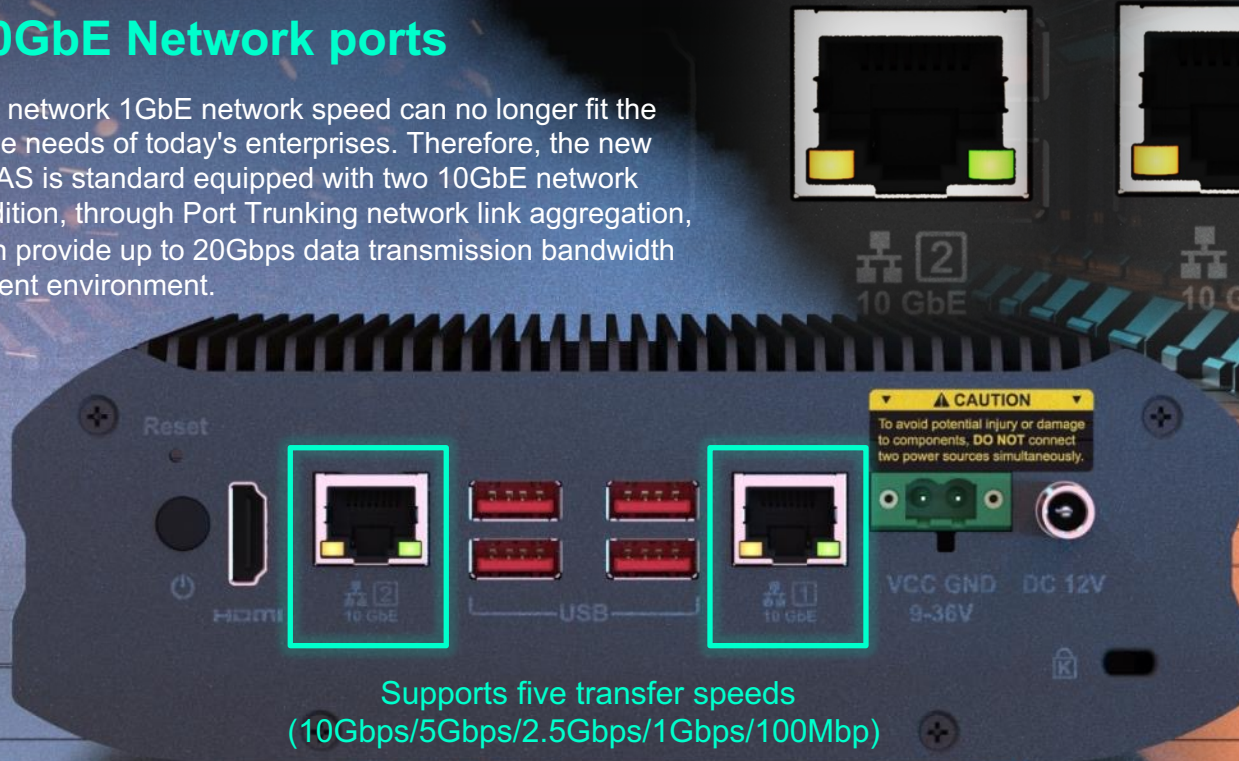

TS-i410X Operating temperature -40°C-70°C

# Dual 10GbE Network ports are enterprise network standard

## Dual 10GbE Network ports

The general network 1GbE network speed can no longer fit the basic storage needs of today's enterprises. Therefore, the new TS-i410X NAS is standard equipped with two 10GbE network ports. In addition, through Port Trunking network link aggregation, the NAS can provide up to 20Gbps data transmission bandwidth in a multi-client environment.

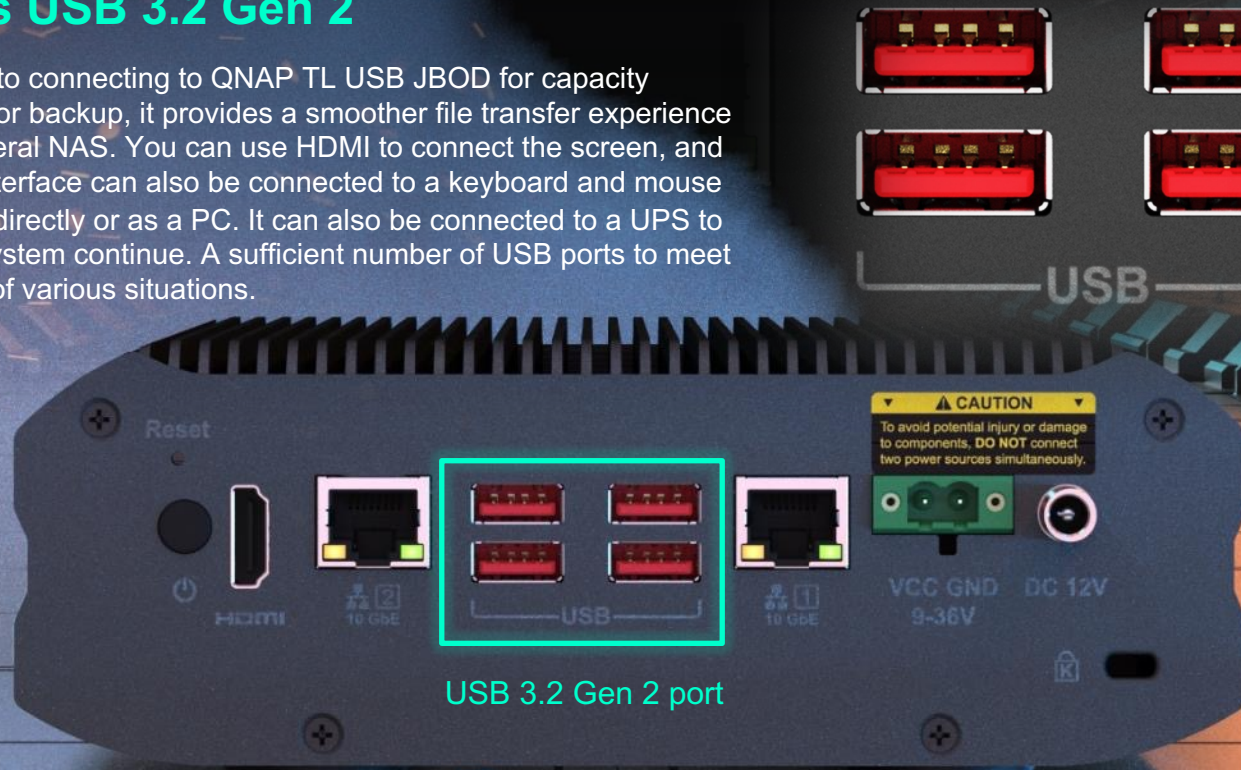

Supports five transfer speeds  
(10Gbps/5Gbps/2.5Gbps/1Gbps/100Mbps)

# 4 ports USB 3.2 Gen 2 (10Gbps)

## 4 ports USB 3.2 Gen 2

In addition to connecting to QNAP TL USB JBOD for capacity expansion or backup, it provides a smoother file transfer experience than a general NAS. You can use HDMI to connect the screen, and the USB interface can also be connected to a keyboard and mouse to operate directly or as a PC. It can also be connected to a UPS to keep the system continue. A sufficient number of USB ports to meet the needs of various situations.

# DC 9~36V wide voltage input or adapter DC 12V input

## DC 12V adapter is the standard configuration

The TS-i410X is shipped with a DC 12V adapter, which can directly connect to the power supply. In addition, its anti-dropping design can avoid the risk of NAS service interruption.

## Choose to connect with Euroblock as the power source with wide voltage (DC 9-36V input)

It supports DC 9-36V wide voltage input, suitable for connecting industrial power supplies in various fields. The standard DC 12V adapter input is another option. Customers can choose according to different situations. It should be noted that only one of the two input can be used and cannot be connected simultaneously to avoid unpredictable risks.

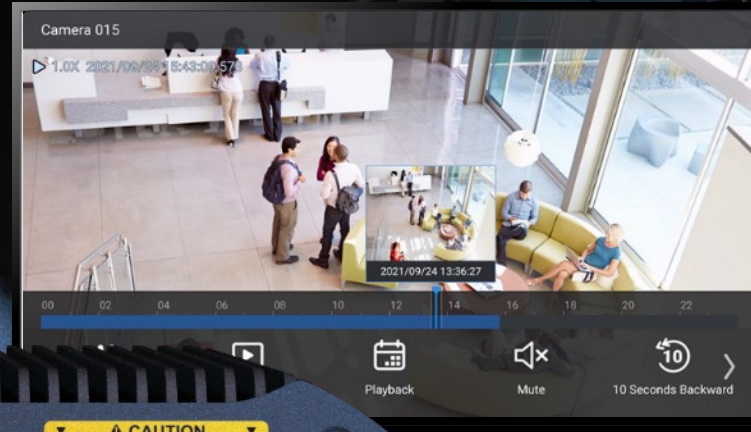

# Support HDMI 4K screen output

## HDMI monitor output with 4K resolution

The HDMI connects to the screen as a monitor. When USB connects to a keyboard and mouse simultaneously, it can use as a PC, and the HybridDesk Station can install to turn it into a home theater.

HDMI

# Data security: safeguard your NAS data

## QuFirewall

You can allow/deny IP addresses and regions to prevent unauthorized access and brute force attacks for safeguarding data and service security.

## Malware Remover

Regularly scan your NAS check for and download the latest malware definitions. Then, when attacked, the infected files can be excluded in real-time, helping to improve the level of NAS data security.

The screenshot shows the QuFirewall application window. On the left, there is a sidebar with a 'Firewall' toggle switch set to 'ON' and a notification that says 'QuFirewall has denied access to 1 events in the last 24 hours.' Below the sidebar are buttons for 'Firewall Profiles' and 'Event Counts'. The main area displays 'Firewall Profiles : 3' and a table with the following data:

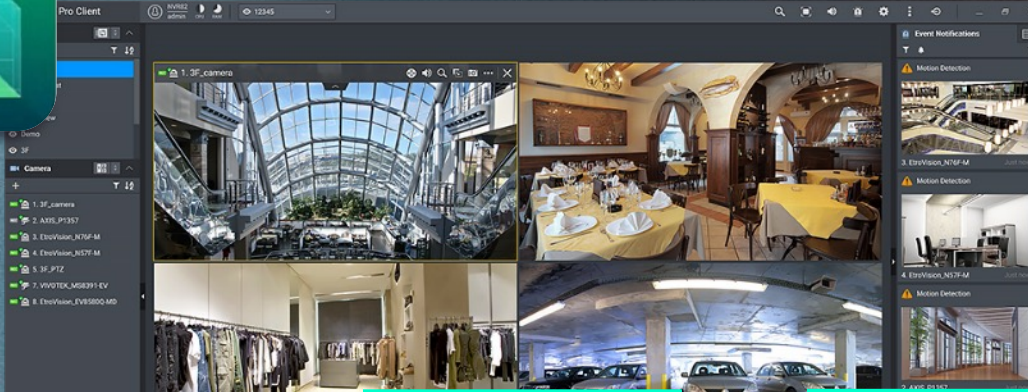

Profile Name	Rules	Action
> <input checked="" type="checkbox"/> Basic protection Enabled	6	
> <input type="checkbox"/> Include subnets only	4	
> <input type="checkbox"/> Restricted security	40	

The screenshot shows the Malware Remover application window. On the left, there is a sidebar with buttons for 'Scan', 'Settings', and 'Event Logs'. The main area features a large blue circular button with a stethoscope icon labeled 'Start Scan'. Below this, there are two rows of status information:

Scheduled Scan Daily, 03:00	Last Scan 20 second(s) ago.
Instant scan after malware definition updates Enabled	Last Scan Status Scan Complete

# Virtualization Station

## Virtualization Station

Virtualization Station allows you to create virtual machines on your Turbo NAS to install Windows, Linux®, UNIX®, Android, QuTScloud, and other operating systems.

## With the monitor and virtual machine, NAS can convert to a PC

You can connect a monitor, keyboard, and mouse using QvPC technology through the virtual machine desktop, just like a PC.

Note: GPU passthrough feature required VM.QTS 5.0.1 and later

# Container Station

QNAP NAS is the only NAS brand that supports LXD and Docker®, Kata Virtual Tri-Core, providing you the best choice for a complete lightweight virtualization solution. You can run an entire Linux® virtual machine on your QNAP NAS and download thousands of applications worldwide from the Docker® Hub/LXD image server online collection.

## At-a-glance dashboard

The dashboard provides a clear overview including the NAS CPU/memory and individual container resource usage.

## Flexible user interface

You can enjoy flexible management using either a command line interface or a convenient web interface.

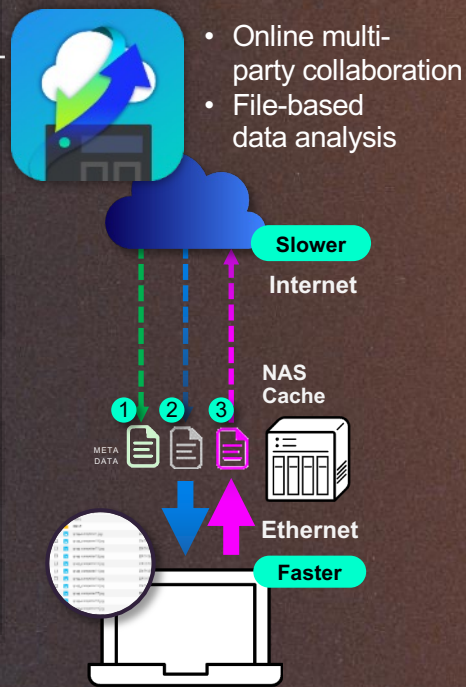

## Permission settings

You can set user permissions to access shared folders on the NAS, other containers' data or NAS devices.

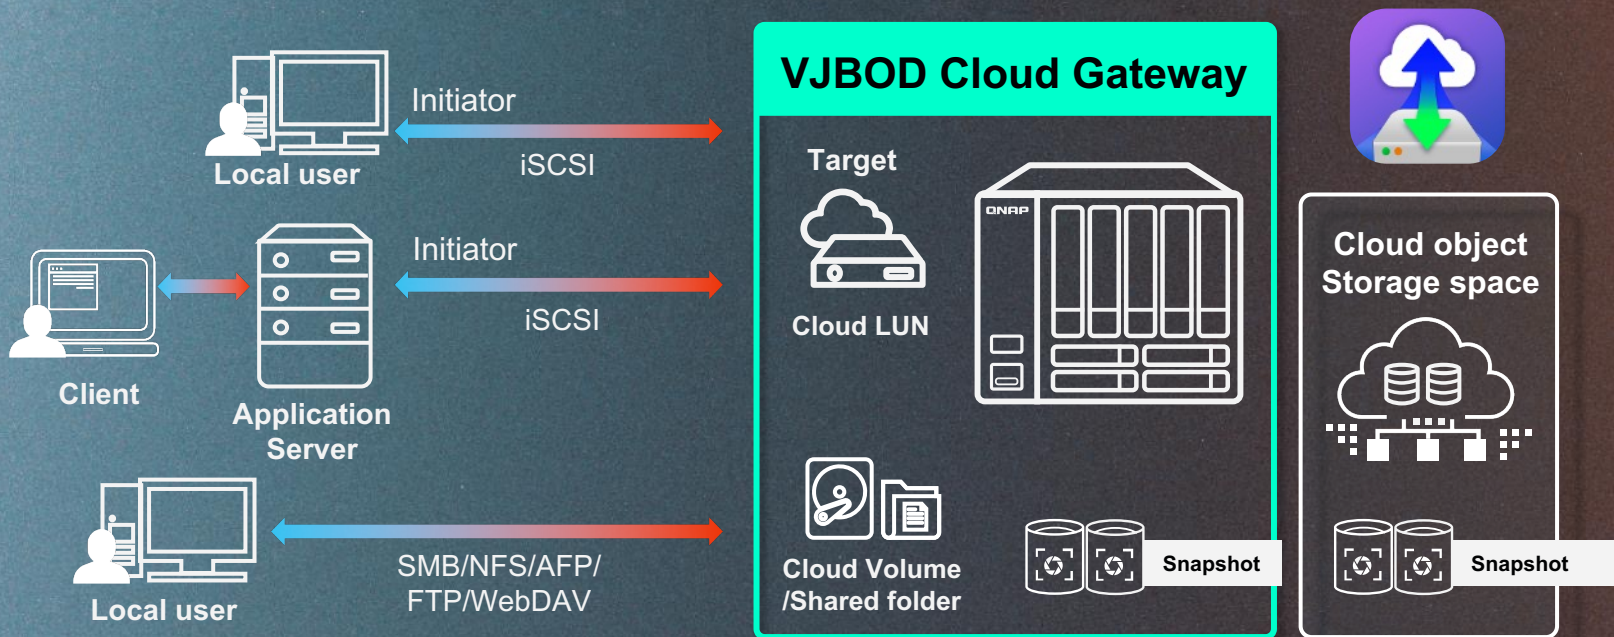

# HybridMount smoothly mount two kinds of cloud space
