

Security Center

Your Security Portal for QNAP NAS

Active file activity monitoring (Beta)

Users can monitor the system status using Security Center to track the average count of unusual file activities, allowing them to be aware of any potential security threats, and take quick response actions.

Instant security measures

If unusual file activities are detected, Security Center performs three instant security measures against threats: enabling read-only mode, creating volume snapshots, or pausing snapshot scheduling.

NAS security status scanning and checkups

Security Center checks for weaknesses, flexibly runs manual/scheduled security scanning and checkups, and detects potential security threats to secure NAS system.

Customized security policies

Users can configure their own security policies (Basic/Intermediate/Advanced) based on the security requirements of network environment, which effectively increase the security checkup accuracy of NAS system.
