

Network HA

Enhance switch level availability for always-on connectivity

MC-LAG Switch Redundancy for a Resilient Network Backbone

Deploy two QNAP L3 Lite switches with MC-LAG to eliminate single points of failure. Fast path switching ensures uninterrupted NAS access and minimizes latency, even during switch failures.

Seamless Failover with Zero Downtime

If one switch fails, the other takes over automatically — ensuring continuous connectivity, stable throughput, and minimized service disruption across your HA architecture.

Recommended Model

QSW-M3224-24T

L3 Lite managed 10GbE Multi-Gig switch

QSW-M7308R-4X

L3 Lite managed 100GbE switch
