

High Availability Manager

Maximize service uptime with automatic failover

Lower Total Cost of Ownership (TCO)

Accessible for small/medium-sized businesses or professional users with limited budgets.

Simplified HA Cluster Management

An intuitive management interface allows administrators to easily monitor cluster status, manage failover operations, and maintain full visibility of HA environments.

Real-Time Data Synchronization with SnapSync

Real-time data synchronization between active and passive servers using SnapSync ensures a zero Recovery Point Objective (RPO), meaning your data is continuously synchronized and protected.

Minimal Downtime with Fast Failover

When a failure occurs, services automatically switch to the passive node in under one minute, achieving an RTO of less than 60 seconds and near-continuous service availability.
