

## Build a Flexible Media Workflow with QNAP NAS

**Share production footage remotely and enable real-time collaboration—without location constraints.**

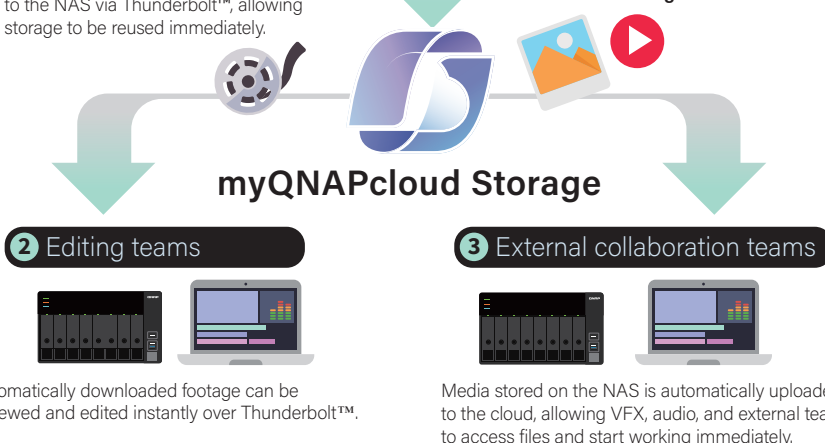

QNAP NAS enables creative teams to capture, edit, and share media efficiently across multiple locations, supporting fast on-site ingest, remote editing, and seamless collaboration with external teams.

### 1 On-site production

Footage is transferred from capture storage to the NAS via Thunderbolt™, allowing storage to be reused immediately.

Footage is automatically uploaded to the cloud, so teams can focus on editing.

### High-speed Thunderbolt™ connectivity

Thunderbolt™ 4 delivers up to 40 Gbps transfer speeds, enabling fast PC-to-NAS data transfer even without a 10GbE network.

### 4K real-time editing with NVMe SSD cache

PCIe Gen 4 M.2 NVMe SSD cache provides low-latency performance for smooth real-time 4K editing.

### Automatic cloud upload with HybridMount

Files stored on the NAS are automatically uploaded to cloud storage—no manual operation required.

### Seamless cloud-based media sharing

Media stored in the cloud is automatically downloaded and cached on NAS systems at each editing location.
