

Unlock the Power of 'Dark Data' to Strengthen Your Organization with AI

Safely Leverage External Confidential Data with AI

Unlock the Power of Generative AI in a Secure Internal Environment

Eliminate the risk of data leaks. Generate insights directly from your NAS files without exposing internal data to the internet. Maximize the potential of your unused corporate assets.

Internal AI Search: Qsirch RAG Search

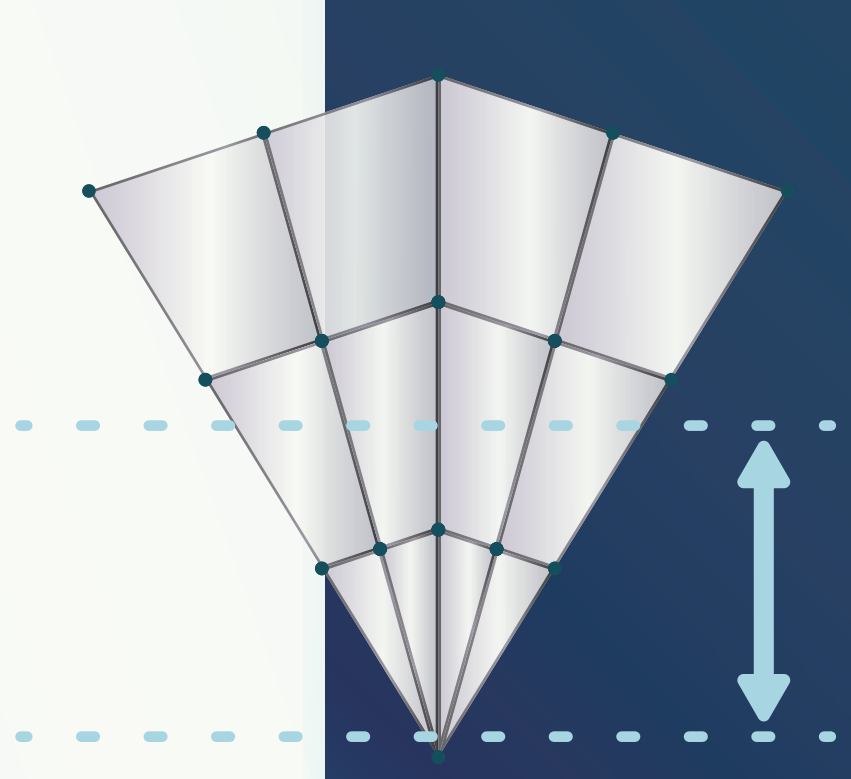

Prevent Confidential Data Leaks

Search your NAS files and get answers directly within your secure network—no external transfers needed. Implement with confidence using top-tier security protocols.

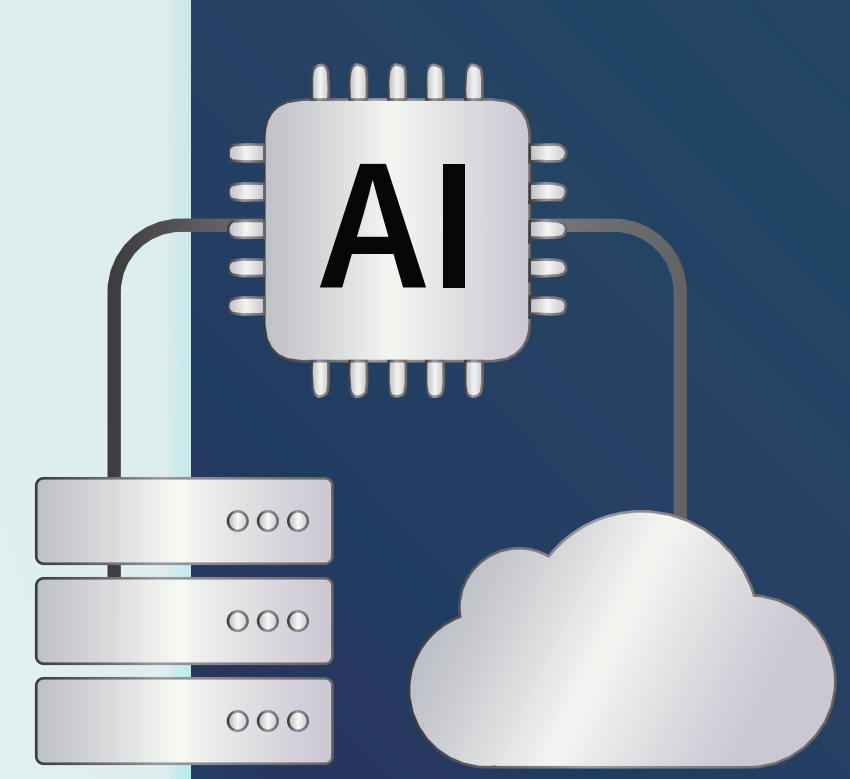

Seamless Document Search

AI recognizes text in images and PDFs, allowing you to quickly search and retrieve digitalized content, making your transition from paper to digital effortless.

Maximize Corporate Knowledge

AI-driven search analyzes data at the server level, revealing previously unused assets and helping your organization unlock valuable insights for faster decision-making.

Optimized LLM Options

Integrate high-performance LLMs (like ChatGPT) for specialized, localized tasks and enhance a wide range of applications with cutting-edge AI engines.

"Searching Time" = "Creating Time"

Optimize Security, Asset Management, and Productivity

QNAP Qsirch RAG Search drives your digital transformation (DX) by simplifying secure data access and enhancing productivity.
