

QNAP

QuWAN

QuWAN Enterprise-Class Mesh VPN Solution

Get a QNAP Router for your enterprise and handle SD-WAN, IPS, and centralized management all at once.

Are you still paying endless subscription fees for network equipment?

The Trap of Traditional Brands

SD-WAN, IPS, and centralized management are modularized and split. Each item requires a fee and annual renewal. The more branches you have, the more staggering the expenses.

QNAP's Commitment

All-in-one built-in features require no extra licensing, making your IT budget precise and predictable from now on.

Six Advantages of QNAP QuWAN SD-WAN

All-in-One Integration | Ready to Deploy

QHora routers feature built-in SD-WAN, IPS edge defense, and remote management for instant, hassle-free deployment.

Cross-Region Efficiency | Automated Mesh VPN Deployment

Quickly build and expand an automated Mesh VPN via a centralized cloud platform, keeping management costs optimal.

Smart SD-WAN Optimization | Built-in at No Extra Cost

Benefit from built-in WAN Aggregation, automatic Path Selection, and QoS prioritization at no extra cost.

Centralized Management | Complete Control Across Sites

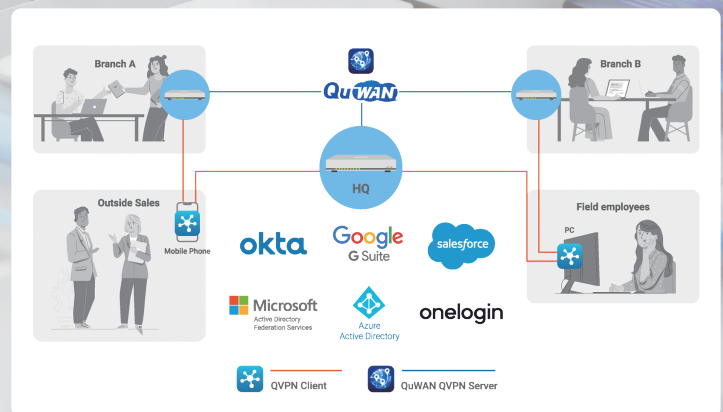

Monitor networks, manage devices, and deploy branch infrastructure remotely from a single dashboard, eliminating on-site visits.

No Licensing Fees | Controllable Budget

Eliminate recurring subscription costs to minimize Total Cost of Ownership (TCO) and ensure a predictable IT budget as your branches scale.

Automated Networking | Completed in One Minute

Routers easily connect to QuWAN Orchestrator to auto-establish Mesh VPNs, enabling remote zero-touch deployment.

Building Comprehensive Endpoint Security with QNAP QuWAN SD-WAN

QuWAN combines Zero Trust, identity authentication, and multi-layered security to build a secure, intelligent network that aligns with SASE principles, comprehensively safeguarding branches, headquarters, and remote connections.

Edge Protection

Built-in IPS with Lionic signatures and GeoIP firewall automatically block known threats and high-risk sources without extra licensing fees.

Secure Access & Encryption

Implements Zero Trust via LDAP/AD/SAML SSO, with full IPsec AES-256 encryption to prevent data interception.

Application-Layer Control

L7 firewall with DPI and Web Filter identify and block high-risk applications and malicious websites to minimize risk.

Intranet Protection

Centrally manage L3 firewalls and NAT rules across all sites via QuWAN Orchestrator to eliminate security gaps.
