

MEGA Scale-out NAS

Scale boldly with high availability

Start with 3 nodes and expand seamlessly
with linear performance and capacity growth

Data Resilience

Multi-replica and Erasure Coding ensure swift recovery and continuous data protection against any disruption.

Service-level High Availability (HA)

Eliminate downtime with multi-node distribution. If one node fails, services shift seamlessly to maintain continuity.

Dynamic Rebalancing

Automatically optimizes data distribution when adding or removing nodes, ensuring peak efficiency and preventing overloads.

Multi-Protocol Support

A comprehensive platform supporting SMB, NFS, and S3 API—bridging the gap between data centers and the cloud.
