READY and RECOVERY

Cyber readiness and resilience

Under security-by-design architecture

ADRA NDR X

Empower your NAS as a proactive NDR for advanced internal threat hunting.

Every AI assistant your employees install makes its own decisions — what to access, what to download, where to connect. Your firewall sees normal HTTPS traffic. Your EDR checks for known signatures. Neither catches a novel threat with no prior pattern. By the time something starts moving laterally toward your NAS, your servers, your critical data — no alert has fired.

ADRA NDR monitors internal traffic behavior, catches what signature-based tools miss, and isolates threats before they spread.

Behavioral detection

Flags anomalies in real-time; built-in honeypots catch lateral movement the moment it starts.

Risk dashboard

Centralized view of all device risk levels, top threats, and weekly trends.

Precision isolation

Quarantines only the affected device. Everyone else keeps working.

Fast recovery

Restore to a clean state via QNAP NAS snapshots and 3-2-1 backup.

AI incident reports

Attack scope, MITRE ATT&CK mapping, and remediation steps, automatically compiled.

Two deployment options. Same protection.

ADRA NDR fits any environment — deploy via an all-in-one switch or extend your existing QNAP hardware. No infrastructure changes needed. Choose your option:

ADRA NDR

QGD Smart Edge Switch The switch is the security appliance. Self-contained, out-of-the-box deployment.

ADRA NDR X

QNAP NAS + compatible QSW switch Install from App Center on your existing QNAP NAS. One NAS manages multiple switches — broader coverage without a dedicated security appliance.

QuWAN SD-WAN

Scalable, secure multi-site networking with automated orchestration for seamless global connectivity.

One platform. Every branch. No surprises. SD-WAN routing, IPS protection, centralized management — with most vendors, each is a separate subscription. Add branches, renew annually, watch costs compound. QuWAN builds all of it directly into QHora routers. No per-feature licenses. No annual fees. No cost structure that scales against you.

Auto Mesh VPN

Join QuWAN Orchestrator and all nodes build a Mesh VPN automatically. No per-device configuration, no changes to existing infrastructure.

SD-WAN optimization

WAN Aggregation, Path Selection, and QoS are built into every QHora router. No extra license fee.

IPS threat protection

Real-time traffic inspection against the Lionic signature database blocks known threats at the perimeter. GeoIP firewall stops high-risk sources before they enter. No extra license fee.

Application-layer control

L7 firewall with deep packet inspection identifies and blocks high-risk applications. Web Filter reduces insider exposure to malicious sites.

Identity & encryption

LDAP, AD, and SAML SSO enforce Zero Trust access by identity and device state. All traffic encrypted with IPSec AES-256.

Centralized policy management

QuWAN Orchestrator pushes L3 firewall rules, NAT policies, and whitelist configurations across all branches in one operation. IPS dashboard tracks threats by signature ID in real time.
