

TS-x51+ Series

High-performance Intel quad-core 2 bay/4 bay NAS supporting HDMI, transcoding, and virtualization for homes and businesses

Facing the increasing demand for data storage, sharing and multimedia processing, more and more users are looking for a NAS system with good performance and an affordable price tag. The Intel® quad-core TS-x51+ series provides an uncompromising high-performance scalable storage solution for professional users.

Well-rounded backup solutions to secure data

QNAP has its own comprehensive backup solution, Hybrid Backup Sync consolidates backup, restoration and synchronization functions into a single QTS application for you to easily transfer your data to local, remote and cloud storage spaces as a comprehensive data storage and disaster recovery plan.

File synchronization across devices and clouds

Qsync utility turns your TS-x51+ into a safe, large-capacity data center for file synchronization. Qsync provides multiple ways of file synchronization and group file sharing, greatly enhancing the flexibility of team projects and collaboration. It also supports centralized configuration, and allows you to remotely erase the Qsync folder on a lost device to avoid data breaches, and even restore it after you have retrieved the device.

Volume & LUN snapshot simplifies restoration

With QNAP snapshot feature, you can take up to 256 snapshots per volume or LUN, efficiently replicate volume/LUN snapshots to remote servers by copying only the changes made, and quickly clone a volume /LUN snapshot as a local volume without interrupting the current system operation. You can even set up the system to automatically take a snapshot of the volume before backup via RTRR/rsync, even when the file is opened.
