Simplify Volume & LUN Restoration with Snapshots

Prevent data loss with snapshots

Fast Data Snapshots

QNAP uses EXT4 and OverlayFS technology, providing high-efficiency volume and block-based iSCSI LUN snapshots.

Volume and LUN Snapshots

ARM-based NAS supports up to 256 snapshots for both volume and LUN in total, and 64 per volume or LUN.

Snapshot Replica

Back up snapshots to remote NAS and each time only copy the changed data, providing double protection while also saving time and bandwidth.
