QNAP

QXP-32G2FC

Dual-port Fibre Channel Expansion Card

- Good connectivity: in a Fibre Channel Storage Area Network (SAN) architecture, any server can be directly connected to any storage device.

- Good Expandability: Enterprises can do extended action without increasing the load on the server and the local area network.

- Good Data Sharing Ability: resources can be shared by many servers and the main network performance is not affected when a large number of files are transmitted.
